PROFESSIONAL SUMMARY

RHCSA & AWS Certified Linux engineer with 3 years of experience in incident monitoring, incident management, and production system troubleshooting across enterprise Linux (RHEL 9) environments. Skilled in proactive monitoring with Prometheus and Grafana, root cause analysis, and ITSM-driven incident lifecycle management using Jira and ServiceNow. Proven track record of 98%+ SLA compliance, 99.9% server uptime, and a 30% reduction in incident detection time through proactive alerting. Strong troubleshooter of server, application, and network issues, with working knowledge of ITIL-aligned processes, Ansible automation, and AWS cloud infrastructure.

CORE COMPETENCIES

Incident Monitoring & Response • Incident Management (ITIL-aligned) • Troubleshooting & Root Cause Analysis • Proactive System Monitoring • Documentation & Reporting • Cross-Team Collaboration • Linux System Administration • Cloud & Networking Fundamentals

PROFESSIONAL EXPERIENCE

Everseen Infotech India Pvt. Ltd. — Linux Tech Support Engineer (L1)

Oct 2023 - June 2026

Pune, Maharashtra

- Incident Monitoring & Response: Monitor enterprise RHEL servers, Docker containers, and applications for alerts, performance issues, and service disruptions; respond promptly and escalate per defined SLAs, sustaining 98%+ SLA compliance.
- Incident Management: Own the end-to-end P1/P2 incident lifecycle — identification, classification, triage, escalation, resolution, and documentation — using Jira and ServiceNow in line with ITSM/ITIL practice.
- Proactive Monitoring: Build and maintain Grafana dashboards with Prometheus alerting across CPU, memory, disk, and availability thresholds, cutting incident detection time by 30% and reducing server slowdowns by 20%.
- Troubleshooting & Resolution: Diagnose and resolve system-level, application, and network issues on RHEL 9 — LVM, disk partitioning, SWAP, kernel tuning, SSH hardening, SELinux, and firewall configuration — maintaining 99.9% uptime.
- Root Cause Analysis & Reporting: Lead RCA documentation and post-incident reviews, identifying recurring issues and preventive measures, and communicating clearly with both technical and non-technical stakeholders.
- Collaboration: Partner with system administrators, engineers, and developers to resolve incidents with minimal business impact and to drive process improvements.
- Automation & Maintenance: Write Ansible playbooks and Bash scripts to automate provisioning, patching, and routine maintenance, reducing manual, repetitive admin work.
- Cloud & Network Support: Manage AWS EC2, EBS, AMI, and IAM; troubleshoot TCP/IP, DNS, routing, and firewall issues affecting application availability.

TECHNICAL PROJECTS

Prometheus & Grafana Monitoring Stack — RHEL 9

2026

Prometheus • Node Exporter • Grafana • PromQL • RHEL 9 • systemd • firewalld

- Deployed Prometheus, Node Exporter, and Grafana as systemd services with custom scrape jobs and alert rules for CPU (>80%), memory (>85%), disk (>90%), and availability thresholds using PromQL.
- Integrated Grafana with Prometheus and imported the Node Exporter Full dashboard (ID: 1860) for real-time server health visualization; configured firewall rules for ports 9090, 9100, and 3000.

Nginx Container Deployment — Podman & Docker Hub

2026

Podman • Dockerfile • Nginx • Docker Hub • RHEL 9 • HTML/CSS • GitHub

- Wrote a Dockerfile from scratch and built a custom Nginx image with Podman (8-step build, 165MB); ran the container with port mapping 9091:80 and verified live HTML serving.
- Tagged and pushed the image to Docker Hub (docker.io/karan8698/mynginxapp:v1), achieving 26+ public pulls, with full documentation hosted on GitHub.

TECHNICAL SKILLS

Monitoring	Prometheus, Grafana, Node Exporter, PromQL, Alert Rules, Dashboard Design (Nagios-equivalent alerting experience)
Incident Mgmt	ITSM/ITIL-aligned Incident Management, P1/P2 Triage, RCA, Jira, ServiceNow, Documentation & Reporting
OS / Linux	RHEL 9, CentOS, Ubuntu — Installation, Kernel Tuning, LVM, SWAP, System Hardening, Boot Troubleshooting
Containers	Docker, Podman — Dockerfile, Image Build, Port Mapping, Docker Hub Registry
Automation	Ansible (Playbooks, Inventory, Roles), Bash/Shell Scripting, Cron
Cloud (AWS)	EC2, EBS, AMI, S3, IAM — AWS Certified Solutions Architect Associate
Networking	TCP/IP, DNS, Routing, Firewall (firewalld), nmcli, Network Troubleshooting
Web Servers	Nginx, Apache — Installation, Configuration, Container Deployment
Virtualization	VMware Workstation, ESXi Concepts, OVA/OVF Deployment Basics

CERTIFICATIONS

- Red Hat Certified System Administrator (RHCSA) — ID: 230-017-865
- AWS Certified Solutions Architect — Associate
- RHCE Training Completed
- Ansible Automation Training Completed

EDUCATION

PGDM — Welingkar Institute of Management, Mumbai	2019 - 2020
Bachelor of Computer Applications (BCA) — Pune University, Nashik	2014 - 2018

Available for immediate joining | Open to Service Assurance, Linux Support, NOC & DevOps roles
