PROFILE

Linux System Administrator with 3 years of experience in Linux support, system monitoring, and infrastructure management. Skilled in troubleshooting production issues, managing Docker containers, and working with monitoring tools like Prometheus and Grafana. RHCSA certified and AWS certified with hands-on experience in AWS fundamentals, shell scripting, and ticketing tools such as ServiceNow and JIRA. Strong ability to reduce downtime, improve system performance, and ensure high availability.

WORK EXPERIENCE

Everseen Infotech India Pvt.Ltd.

OCT 2023 - PRESENT

Linux Technical Support Engineer (L1)

- Key Responsibilities & Achievements:
- Provided L1 support for Linux systems, handling user management, password resets, and access issues.
- Monitored system performance using Prometheus and Grafana, ensuring high uptime and system stability.
- Managed and monitored Docker containers, including health checks and resource utilization.
- Resolved server issues proactively, reducing downtime and improving system availability.
- Worked on JIRA and ServiceNow for incident and ticket management.
- Performed daily server health checks using commands like top, ps, and disk monitoring tools.
- Configured secure remote access using SSH and managed file permissions.

DOCKER MONITORING SETUP

- Deployed containerized applications using Docker.
- Implemented monitoring using Prometheus and Grafana.
- Configured alerts to detect system failures and performance issues.

AWS EC2 DEPLOYMENT (BASIC)

- Launched and configured EC2 instances.
- Created AMIs and managed snapshots for backup.
- Installed and configured Linux servers on AWS.
